Future prospects of NSPS

- In our project, we have just used one state as an example (Uttar Pradesh). However, we aim to build a National Service, ie; one that is available for citizens across all the states of India.
- We will also be providing a Language Change option, to accommodate the diverse culture and different dialects throughout the country, in order to ease the understanding of the services provided to the citizens.
- Taking into account that manually filling out a form is easier for some, a Scan FIR option will be provided, where the citizen can fill out their form and upload it as an image. The OCR extension will extract the data and store it in the database.
- To avoid leaking of confidential information, and to secure one's Aadhar card details, a Face Recognition feature will be included so

as to enhance the security measures provided by NSPS.

- An Online Fine Payment facility will be issued, where citizens who have received a various kinds of fines, for eg: Traffic, speeding, etc. can pay their dues in a simple and fast manner.
- Issuing a Police Certificate after a background check on any applicant, in cases of them having any kind of criminal record- such as arrest, conviction, etc.

Contributions of team members

- **Mahima Lolla**- Overall design and building of the website using HTML, CSS, JS
- **Ayush Barik**- OCR implementation using Tesseract, JS
- **Deepthi Sudharsan**- Assistance in design and building of the website
